

# MindManager Enterprise

## Visual Business Mapping and Collaboration for your Organisation.

MindManager Enterprise expands the power of visual business mapping to the entire organisation, enabling effective collaboration on key business initiatives, including project management, business and strategic planning, and information management.

- Gives teams a smarter way to collaborate using MindManager with Microsoft SharePoint®.
- Empowers teams to create and validate detailed project plans in MindManager, then take advantage of SharePoint task management to coordinate implementation.
- Improves communication, giving everyone in the organisation the ability to view easy-to-navigate information maps via the SharePoint browser.
- Reduces support issues caused by user difficulty in finding information within SharePoint. Fully leverages Microsoft infrastructure for security, compliance, governance and business process management.

## Key Features

- Collaboration and project management via Microsoft SharePoint
- Map viewing for all SharePoint users
- SharePoint queries from MindManager for Windows
- Bi-directional task synchronisation (from map to/from SharePoint)
- Attach documents, insert hyperlinks, tasks, locations and searches

## Technical Requirements

### For MindManager Linker (add-in for Windows desktop software)

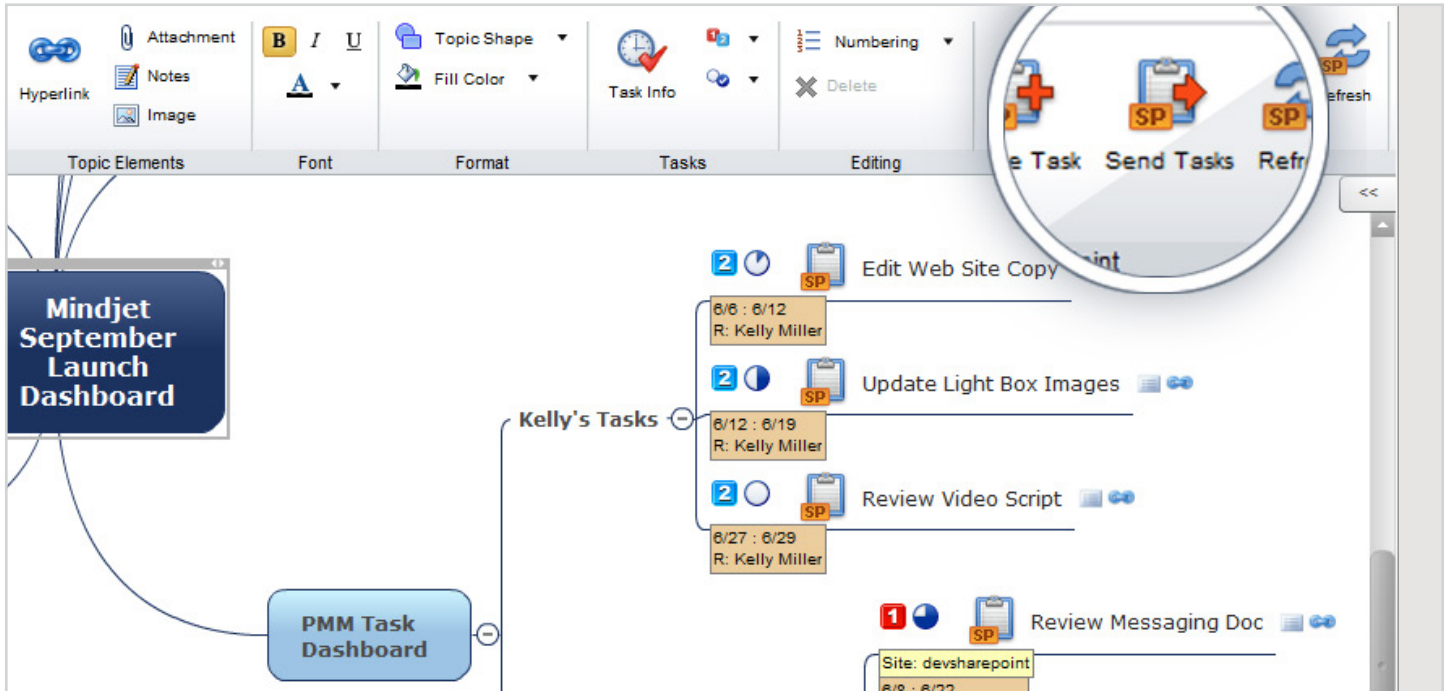

- MindManager for Windows version 15 or greater
- SharePoint Authentication types: NTLM, Forms Based, SAML for SharePoint 2010 or 2013

### For MindManager Server software

- SharePoint versions
  - SharePoint 2010** [Foundation, Server, Dedicated Office 365]
  - SharePoint 2013** [Foundation, Server, Dedicated Office 365]
- Adobe Flash Player (for client)

Flash 10 (or above)

- Browser for SharePoint 2010: Internet Explorer 8 & 9 Recommended, Firefox 17 & 18
- Browser for SharePoint 2013: Internet Explorer 9 and above, Firefox 17 and above, Chrome (latest public release), and Safari (latest public release)
- Operating System: Windows XP and Windows 7
- Server Operating System
  - SharePoint 2010** Windows 2003, Windows 2008 R2, Windows 2012 R2
  - SharePoint 2013** Windows 2003, Windows 2008 R2, Windows 2012 R2

## Visual Collaboration

People across the organisation can use MindManager's intuitive visual framework to capture and organise information then share editable maps, so teams can solve problems, prioritise strategies, plan projects and process information together.

- MindManager Enterprise users can access SharePoint from their desktops or via the SharePoint browser.
- Anyone in the organisation can view MindManager maps within SharePoint, without downloading additional software.

## Engage and Align Teams and Decision-Makers

MindManager Server enables users to go from project inception to execution. They can easily create and manage project dashboards that show task status by individual, and can be refreshed by links to SharePoint sites.

- Search, filter and present SharePoint tasks specific to a user so that they and their manager can stay on top of projects and items due.
- Create project plans and tasks that can be sent into SharePoint, allowing users to make plans once, and stay on top of their progress. Plan topics and SharePoint tasks are linked, so that changes made in the topic are reflected in the task and vice versa.

## Enhanced Information Management

Reduce information overload using MindManager to create information maps that consolidate and organise files stored across SharePoint sites, other content repositories, and on the web.

- Use MindManager's intuitive visual framework to create annotated hierarchical "information diagrams" that make data easier to find and digest.
- Organising information by project, department, or topic makes it easy for SharePoint users to quickly find the information they need to get work done.
