

Lo que opinan los usuarios de Embarcadero RAD Studio XE

Danysoft | Representante exclusivo en la península ibérica

Comentarios de usuarios

"RAD Studio is the only product to offer true native platform rapid development for Windows applications. It offers unmatched performance, ease of use, expandability, and flexibility."

- Boian Mitov, Mitov Software

"It's on every level comparable with other developer tools, usually even far better. There is no reason to prefer MS Visual Studio or similar tools."

- John Schmidt

"We are using Delphi for Win32 since 16 bit version, and we can confirm that, Delphi 2011 has the strongest feature set from the history."

- Fernando Rizzato, Tool Engenharia

"Your products are I think Best Database Application Developer tools both desktop and the web... You have great tools, easy usable and powerful. I like your tools."

- Sami Heybet, OBM Buro Makinalari

"For Delphi, Hands down, best dev. tool for native apps. I can literally program anything, quickly, fantastic database connectivity, fast compile and run speeds."

- Filip Demuynck, Quadrix

"Speed optimization is essential for near-real time monitoring. Only C++Builder gave me the performances I need for such a monitoring context. C++Builder produced the fastest execution time of all other development tools I tried."

- Steve Jordi, Tiltsoft

"C++Builder makes GUI design very simple, allowing you to concentrate your time on the business end of the application. Existing C++ code and libraries can be used along with a wealth of Delphi/VCL components."

- Stephen Craig, Cubic Software

"The IDE and VCL allow us to produce the best UI in our industry. Integration with unit test tools has allowed us to produce higher quality code faster too. Couple these with database and XML support and we are able to produce full featured applications faster."

- Phyllis Lang - Knightware

"C++Builder is versatile and easy to use."

- Bruce Larrabee, Westbrook Enterprise LLC

"Prism is totally cool and so easy to use. It gives you full access to the latest .NET stack without limits."

- James Nelson

"I actually like to see that the future of this project is good. Integration of Delphi Prism with Mono is actually a very good idea."

- Juan C. Cilleruelo, Sopra Group

"Considering the additional features included into Prism, compared with any other .NET language, I think it is the obvious alternative to C#"

- Ciprian Popa, Jaguard

"If you want to do Windows development, and you want to work with native code in a native style, I think that Delphi 2010 is a very productive tool. It combines a lot that really saves time (such as DataSnap and IDE Insight) with the power and flexibility of native code. If you need support for certain functionality (especially touch-related items), it is the only shipping product on the market that does these things."

"Every time I work with the Embarcadero team, I feel like they are writing the tools that they would love to use; they really are "developers' developers," and they understand the development process very well and implement it as tools quite nicely."

- [Justin James, TechRepublic](#)

"Code Audits in the Professional, Enterprise and Architect editions provide extremely helpful code and project health monitoring via an easy to use, information-rich reporting interface. The new IDE Insight makes navigating to all the plethora of options packed into the development environment as easy as a filtered Google search."

- [Dr. Dobb's Journal](#)

"I'm absolutely delighted with generics and Delphi 2010 in general. Delphi continues to amaze and impress me. Everywhere I turn, the product is well-thought out, and polished – providing enormous productivity. Clearly you all listen to your customers. I wanted to express my thanks to you and the entire team there for a job well done. Delphi 2010 rocks. All of your efforts are enormously appreciated out here!" | - Tom Field

"The enhanced RTTI and Attributes has allowed me to build dynamic reusable libraries to solve real world problems. I am sure it has saved us 100s of hours of time."

- Robert Love, DWS/DTS - CATS Team Supervisor, Utah State Government

"Delphi 2010 is the enjoyable sweet mix of a fast, stable and responsive IDE, superfast compiler, latest operating system API support, fine language enhancements such as RTTI extensions and attributes, debugger with many new capabilities and great new IDE features like IDE Insight and Delphi code formatter. After one week of intensive use of the final release now, it's clear how much attention to detail and quality Embarcadero's Delphi team put into the product. When all this comes with an unparalleled backwards compatibility for a software development product, there is only one conclusion: do yourself a favor, get Delphi 2010 and enjoy your new shiny secret weapon."

- Bruno Fierens, CEO, TMS Software

"It's easy. It's fast. It's delicious using it. Delphi 2010 is addictive to use. You guys at Embarcadero can say without fear, 'this is the best Delphi ever made.' It's pure joy. Delphi 2010 is even more responsive than the last Delphi I used (2006) and has a dbExpress Driver for Firebird which works. Delphi 2010's IDE Insight feature is one of those things you say "how nobody thought of this before???". It's cool!"

- Fabricio Pontes de Araujo, Systems Analyst and Programmer, IBS - Info Business Solutions

"Delphi 2010 builds on all of 2009's strong points, with powerful new IDE and debugger features, improved Generics support, and the fastest compiler known to man."

- Mason Wheeler, Delphi Developer

"We have switched to RAD Studio 2010 on the very day of its release, and are thrilled by the new development experience that we are enjoying now. To me personally the most important new features in Delphi 2010 are Debugger: freeze threads, thread-specific breakpoints; seeing TDateTimes in Debugger windows; writing your own visualizers for specific datatypes (I'll write one for TFileTime), IDE insight: F6 and Gesture support.

"99% of the time I am working only on my main product which is Super Flexible File Synchronizer. It's a Windows replication/backup tool, so I am using a lot of Delphi components from Embarcadero and from third parties, plus my own. I think Delphi is the best language to write such tools. It allows you to do everything, including unlimited direct Windows API access even in complex cases like the Volume Shadow API as well as Windows Explorer Shell Extensions and so forth."

- Tobias Giesen, Director, Super Flexible Software
