Figure 1.1: Integrated circuits in a smartphone board.....	34
Figure 1.2: Components integrated in a SoC die.....	36
Figure 1.3: Relative size of a SoC, shown behind a SIM card.....	38
Figure 1.4: Many smartphones and tablets have a microSD slot.....	41
Figure 1.5: The battery is usually the biggest component in smartphones.....	42
Figure 1.6: The three basic layers in a typical touch-screen.....	44
Figure 1.7: Some smartphones include a small keyboard.....	47
Figure 1.8: The device can be moved across the axes of the three-dimensional space, as well as rotated around them.....	50
Figure 2.1: Palm OS mobile device.....	61
Figure 2.2: A Psion Series 7 running Symbian.....	62
Figure 2.3: The Compaq iPAQ Pocket PC.....	63
Figure 2.4: iOS User Interface.....	64
Figure 2.5: Android 4.4 User Interface.....	66
Figure 2.6: Windows Phone 8 User Interface.....	68
Figure 3.1: Latest HTML5 specification home Web site.....	78
Figure 3.2: ThemeRoller, the theme definition tool for jQuery Mobile.....	80
Figure 3.3: Debugging tools integrated into Chrome Web browser.....	81
Figure 3.4: Schematic representation of a hybrid mobile application structure.....	82
Figure 3.5: HTML5 Builder includes support for PhoneGap application development....	85
Figure 3.6: Xcode can be downloaded for free from Apple Developer's website.....	89
Figure 3.7: The NBAndroid plug-in for NetBeans adds Android development capabilities to this Java IDE.....	90
Figure 4.1: We have to select the features to install in our system.....	100

18 - List of Figures

Figure 4.2: The Android SDK and NDK should be also installed.....	101
Figure 4.3: The installation process information window.....	102
Figure 4.4: Warning concerning the availability of the Update 2 to Delphi XE5.....	103
Figure 4.5: The updates installed can be found in the About window.....	104
Figure 4.6: Maintenance options provided by the installation utility.....	105
Figure 4.7: Through the SDK Manager we can update all Android SDK components....	106
Figure 4.8: The currently configured SDKs can be found in the page Environment Options→SDK Manager, in the Options window shown by the Tools→Options option....	107
Figure 4.9: Once the Android platform was selected, it is possible to add a new SDK..	108
Figure 4.10: We have to introduce the paths to the Android SDK and NDK.....	109
Figure 4.11: List of configured Android virtual devices.....	111
Figure 4.12: Configuration of a virtual device.....	112
Figure 4.13: List of definitions from which virtual devices can be created.....	113
Figure 4.14: The USB debugging option must be activated.....	114
Figure 4.15: Looking for the Device Manager Windows utility.....	115
Figure 4.16: Option we have to use for updating our USB driver.....	116
Figure 4.17: The driver is already in our system.....	116
Figure 4.18: Install the Xcode software from the App Store.....	118
Figure 4.19: The Command Line Tools are installed from the Xcode Preferences window.	119
Figure 4.20: File sharing between OS X and Windows will be essential.....	120
Figure 4.21: PAServer has to be installed in the Mac used for deploying and testing.....	121
Figure 4.22: RAD PAServer must be running before deploying application from Delphi.	122
Figure 4.23: The PAServer Manager application in the Finder.....	123
Figure 4.24: PAServer Manager user interface.....	124
Figure 5.1: Main elements in the Delphi IDE.....	129
Figure 5.2: Customization controls in a window of the Delphi IDE.....	130
Figure 5.3: IDE Insight looking for items starting with “tabb”	132
Figure 5.4: There are several templates available to generate new mobile projects.....	133
Figure 5.5: Looking for the FireMonkey Mobile Application option through IDE Insight.	134
Figure 5.6: All the templates can be found in the Tool Palette.....	134
Figure 5.7: Multi-Device project in Delphi XE7.....	135
Figure 5.8: The project contains two related modules.....	136
Figure 5.9: Initial content of the module .pas added to the new project.....	137
Figure 5.10: The designer can change the skin shown, as well as its orientation.....	139
Figure 5.11: The mask can be disabled, leaving only the surface where the user interface will be shown.....	140
Figure 5.12: Selecting the visual style in the designer.....	141
Figure 5.13: Selecting the view we are interested in.....	143
Figure 5.14: Import directives for the configuration modules for each view.....	144
Figure 5.15: Changing a button text in the Object Inspector.....	145
Figure 5.16: Editing the list of icons associated to the TabItem.....	146
Figure 5.17: The interface after the changes in titles and icons have been applied.....	147

List of Figures - 19

Figure 5.18: Looking for a component in the Tool Palette.....	148
Figure 5.19: Context menu associated to a component in the designer.....	150
Figure 5.20: Changing the TLabel alignment inside its container.....	151
Figure 5.21: Text styles and attributes.....	152
Figure 5.22: Selecting the item appearance.....	153
Figure 5.23: We can choose among several field types.....	154
Figure 5.24: The LiveBindings designer.....	155
Figure 5.25: Editing the title of the buttons shown at the right edge of the list.....	156
Figure 5.26: List of events of the ListView component.....	158
Figure 5.27: Code Insight opens a list of available objects for the current context.....	160
Figure 5.28: Selecting a method we can see its argument list and return type.....	161
Figure 5.29: Each platform can have several targets and an active configuration.....	163
Figure 5.30: Adding a new platform to the current project.....	164
Figure 5.31: We can inspect the initialization code of the project.....	166
Figure 5.32: How to select the target platform in Delphi XE7.....	167
Figure 5.33: List of elements in the first page of the user interface.....	168
Figure 5.34: A few items have been added to MyMunchies list.....	169
Figure 5.35: Setting a breakpoint in the statement which adds an item to the list.....	171
Figure 5.36: The Call Stack window shows the functions executed until the current point has been reached.....	172
Figure 5.37: Inspecting the content of a local variable.....	173
Figure 5.38: Moving the mouse pointer to an identifier to get its current value.....	174
Figure 5.39: Adding a new item to the Watch List.....	174
Figure 5.40: The project running in a physical Android device.....	177
Figure 5.41: The PAServer software must be running in the OS X machine.....	178
Figure 5.42: Configuring and testing the connection between Delphi and the OS X computer.....	179
Figure 5.43: The project running in the iOS Simulator.....	180
Figure 5.44: It is possible to have more than one configured connection.....	181
Figure 6.1: Structure of the Header/Footer with navigation application template.....	187
Figure 6.2: Editing the appearance of a TSpeedButton component.....	189
Figure 6.3: Setting the style and position of the tabs in a TabControl component.....	190
Figure 6.4: Dialog box to edit the pages in a TTabControl.....	191
Figure 6.5: Structure and user interface of the Phone Master-Detail application template.....	192
Figure 6.6: Data binding between the PrototypeBindSource and user interface controls.....	193
Figure 6.7: The tablet master-detail user interface.....	195
Figure 6.8: Multi-device application templates in Delphi XE7.....	196
Figure 6.9: Initial layout of the master-detail user interface.....	197
Figure 6.10: The column containing the TListView is hidden in small screens.....	198
Figure 6.11: The same user interface on a table in landscape mode.....	199
Figure 6.12: The TMultiView contains the TListView.....	200
Figure 6.13: 3D components in the Tool Palette.....	201
Figure 7.1: Action property Drop-down list.....	207

20 - List of Figures

Figure 7.2: Categories of standard actions provided by the New Standard Action option.....	208
Figure 7.3: The TActionList editor (right) and properties of the selected action (left).....	209
Figure 7.4: List of standard actions.....	210
Figure 7.5: User interface structure.....	213
Figure 7.6: The three TSpeedButton added to the TToolBar will execute the actions.....	214
Figure 7.7: Members of the Touch property.....	217
Figure 7.8: Each gesture will be linked to an action.....	219
Figure 7.9: TouchTargetExpansion sub-properties.....	220
Figure 7.10: List of interactive gestures.....	222
Figure 7.11: The label font size can be zoomed.....	224
Figure 7.12: Establishing orientation preferences for the current project.....	228
Figure 7.13: The TLabel rotates when the screen orientation changes.....	231
Figure 7.14: Landscape orientation of the control showing the application events.....	235
Figure 7.15: The TMemo content is saved and then reloaded.....	239
Figure 7.16: The application stores its state in a configuration file.....	242
Figure 7.17: You need to specify a path to deploy additional files.....	243
Figure 7.18: Default configuration after adding a TMultiView to a form.....	248
Figure 7.19: Sub-properties of the DrawerOptions property.....	251
Figure 7.20: PopoverOptions sub-properties.....	253
Figure 8.1: The Forms sample project works with two different forms.....	263
Figure 8.2: Delphi is able to track all the TODO comments for us.....	265
Figure 8.3: Each member in an enumeration is assigned a numeric value.....	272
Figure 8.4: The assigned value is out of the subrange limits.....	274
Figure 8.5: The Range checking option is disabled by default.....	275
Figure 8.6: Code Insight helps us showing the members of the records.....	280
Figure 8.7: Adding a new unit to the current project.....	302
Figure 8.8: Code template introduced automatically.....	323
Figure 8.9: Templates window.....	324
Figure 8.10: Code formatter profile selection.....	326
Figure 8.11: The different versions can be compared and restored.....	328
Figure 9.1: Alignment, margin and padding properties example user interface.....	339
Figure 9.2: Adding a new picture to the TImage component.....	341
Figure 9.3: The TLabel is a child of the TImage, which is itself a child of the TButton..	341
Figure 9.4: The label's position is relative to the edit box.....	343
Figure 9.5: Some properties can be animated.....	344
Figure 9.6: List of visual styles for a TButton component.....	346
Figure 9.7: Two buttons with tint properties.....	347
Figure 9.8: Structure of the checkcellstyle visual style.....	348
Figure 9.9: A bitmap containing images associated to user interface components.....	349
Figure 9.10: Visual style files for each target platform.....	350
Figure 9.11: Editing the properties of a visual style item.....	352
Figure 9.12: The visual style files added as resources of the project.....	354
Figure 9.13: The combo box will allow to choose one of the available visual styles.....	355
Figure 9.14: Structure of the user interface.....	356

List of Figures - 21

Figure 9.15: Appearance of the user interface after applying each visual style.....	358
Figure 10.1: Properties supporting animations and animation components.....	361
Figure 10.2: The drop-down list provides the types of animations available to this type of property.....	364
Figure 10.3: List of properties that can be animated.....	365
Figure 10.4: List of animation triggers.....	368
Figure 10.5: Structure of the user interface to be composed.....	370
Figure 10.6: Second TFloatAnimation properties.....	374
Figure 10.7: Appearance of the user interface with the animations working and after some transformations have been applied.....	377
Figure 10.8: Visual effects components in the Tool Palette.....	379
Figure 10.9: The BlockCount property will be animated.....	381
Figure 10.10: The user interface with the pixelated visual effect.....	382
Figure 11.1: The properties list of a FMX 3D form.....	387
Figure 11.2: Three-dimensional objects in the Tool Palette.....	389
Figure 11.3: The handles linked to each face allow us to rotate the object.....	390
Figure 11.4: A 3D text generated by extrusion.....	391
Figure 11.5: Setting the Points and TriangleIndices properties, any three-dimensional object can be defined.....	393
Figure 11.6: One of the sample meshes distributed with the product.....	394
Figure 11.7: Any bitmap can be loaded to be used as a texture.....	396
Figure 11.8: A TSphere with a texture applied on its surface.....	397
Figure 11.9: Two identical spheres with the same material and three light sources.....	400
Figure 11.10: The second TCamera is above the scene.....	402
Figure 11.11: The bottom-aligned TLayer3D contains the three TCheckBox controls...	404
Figure 12.1: Components for accessing sensors.....	411
Figure 12.2: TMotionSensor properties and events.....	412
Figure 12.3: Application permissions configuration.....	416
Figure 12.4: Component hierarchy on the project user interface.....	423
Figure 12.5: Appearance of the user interface in the form designer.....	425
Figure 12.6: Initial appearance of the user interface.....	434
Figure 12.7: Motion sensor selection.....	435
Figure 12.8: The bottom graph reacts to device inclination.....	436
Figure 13.1: Location mode configuration in Android.....	442
Figure 13.2: The permission to access the Internet must be activated.....	451
Figure 13.3: Structure of the user interface we have to design.....	453
Figure 13.4: Definition of the elements contained in the list.....	454
Figure 13.5: Coordinates returned by the location sensor.....	456
Figure 13.6: The map automatically updates the position it is showing.....	458
Figure 13.7: Descriptive information.....	460
Figure 14.1: Components for playing media and accessing the camera.....	465
Figure 14.2: Selecting the camera to use.....	467
Figure 14.3: Items to visualize the picture in the user interface.....	470
Figure 14.4: Components needed to configure capturing pictures.....	472
Figure 14.5: Focus mode selection.....	473

22 - List of Figures

Figure 14.6: Flash and torch configuration.....	473
Figure 14.7: Controls to adjust the visual effect intensity.....	474
Figure 14.8: The application showing the pictures obtained from the cameras.....	478
Figure 14.9: Requesting permission to write data into external storage.....	480
Figure 14.10: Standard actions specific for mobile applications.....	481
Figure 14.11: Items in the user interface.....	484
Figure 14.12: Choosing a picture from the photo library and a destination to send it...	486
Figure 15.1: Tethering components in the Tool Palette.....	494
Figure 15.2: Starting a new desktop application project.....	500
Figure 15.3: User interface for the managers desktop application.....	500
Figure 15.4: User interface for the customers mobile application.....	502
Figure 15.5: The drop-down list on the customer application allows to choose among the specialties offered by the desktop application.....	506
Figure 15.6: Definition of a shared resource in the desktop application.....	508
Figure 15.7: Changes in the desktop are immediately notified to the mobile application.	512
Figure 15.8: Definition of a simple TAction called SendID.....	515
Figure 15.9: Publishing the action to make it accessible for remote applications.....	516
Figure 15.10: The TLocalAction object will be of Mirror type.....	517
Figure 15.11: Selecting the adapter to use.....	521
Figure 15.12: We have to activate the Bluetooth permissions.....	523
Figure 15.13: User interface we have to design.....	525
Figure 15.14: The system asks permission for the operation demanded by the application.	527
Figure 15.15: Event list of the TBluetoothLE component.....	532
Figure 16.1: User interface of the program to send an immediate notification.....	538
Figure 16.2: The immediate notification shown in the notification center.....	538
Figure 16.3: Notifications in iOS.....	540
Figure 16.4: Notifications in Android.....	541
Figure 16.5: Wizard to create a Google AdMob account.....	543
Figure 16.6: After creating the account, we can start to use the service.....	544
Figure 16.7: Entering the information about the new application.....	545
Figure 16.8: Obtaining the Ad unit ID corresponding to the new application.....	546
Figure 16.9: We must join the iOS Developers Program.....	547
Figure 16.10: Adding a TBannerAd aligned to the top of the form.....	548
Figure 16.11: We have to activate additional permissions for AdMob to work.....	549
Figure 16.12: Advertising in the top area of the form.....	550
Figure 16.13: We have to configure additional linker parameters for iOS.....	552
