Software Licensing

Embarcadero offers a variety of licensing options, including Workstation, Network Named User, and Network Concurrent, so organizations can better manage and control their product licenses, while at the same time maximize usage. The network-based licensing options provide a flexible, cost-effective solution for organizations with a larger number of users, who want greater control over software assets, or the ability to share a pool of licenses between users.

Workstation

A Workstation license is locked to one machine ("node-lock") or one person ("named user".) A node-locked Workstation license can be installed on only one machine and cannot be used concurrently. A named user Workstation license is registered to an individual and the named user is the only person permitted to use the product. The Workstation licensing options work best for power-users who need a copy of the software available on their workstation at all times. Workstation licensees are required to create an **Embarcadero Developer Network** account in order to register their product. A Workstation license does not require installation of a license server.

Network Named User

Network Named User is very similar to Workstation licensing in the regard that a license is designated to an individual. The difference is the licenses are managed over a network using the Embarcadero License Server (ELS) or optionally FLEXnet Publisher. An administrator installs the license server (ELS or FLEXnet) software in a central location on your network and maintains a list of Network Named Users who are authorized to operate the product. The Network Named User is guaranteed access to that license at all times or until the Administrator revokes access.

This option has many advantages including centralized administration, fast and easy provisioning and de-provisioning of software assets, and asset management features including usage reports.

Network Concurrent

Network Concurrent licenses are managed through the Embarcadero License Server (ELS), or optionally FLEXnet Publisher. It provides users with the flexibility of using any Embarcadero product, but will only acquire a license when the application is open. This license option tracks the number of simultaneous users. If the number of simultaneous users exceeds the number of purchased licenses, anyone who subsequently tries to start the software is denied access.

Network Concurrent licenses are only valid for the global region in which they are sold. Global contracts can be purchased on a contractual basis. Please **contact your sales representative** for more information.

Other License Considerations

Some Embarcadero products offer Term or Perpetual licensing options. Please **contact your sales representative** for more details.

Embarcadero All-Access is a membership offering which includes access to the specified products within each membership level, as well as support and maintenance for the duration of an active membership. For product and pricing information about Embarcadero All-Access **contact your sales representative** or read more at Embarcadero All-Access.
