

ABBYY® FineReader 11

What's New

Up to 45% greater efficiency with new version 11 of ABBYY's award-winning text recognition software

ABBYY FineReader 11 is an intelligent OCR (optical character recognition) software programme that creates ready-to-edit and ready-to-use electronic documents from scans, PDFs and digital camera images, with great precision and efficiency. The latest version of ABBYY's award-winning text recognition software delivers up to 45% greater efficiency with enhanced technology and new tools designed with your productivity in mind.*

Save time and resources typically spent on retyping texts from scanned paper documents, PDF files and digital camera images. ABBYY FineReader significantly reduces manual work because

it "reads" and converts files into text which you can copy and paste, search or edit. Convert documents into accessible searchable archives or easily update and republish correspondence, contracts and articles.

ABBYY FineReader 11 contains improved ABBYY ADRT®, which retains and reconstructs the layout of documents with complex formatting such as reports. This ABBYY technology helps minimise the time and effort spent on manual retyping and re-formatting across multiple pages. **It's information transformation made easy.**

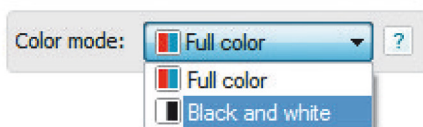

Top new features

Superior recognition accuracy

- Up to 99.8% accuracy, **IMPROVED** ADRT® and better format retention*
 - Enhanced document analysis delivers better detection and retention of formatting such as tables, margin notes, vertical text and font styles.
 - Improvements in detection of headers and footers and other multipage formatting.
 - Retention of multipage document structures (e.g. tables of contents) in new saving formats.

Faster processing for increased productivity

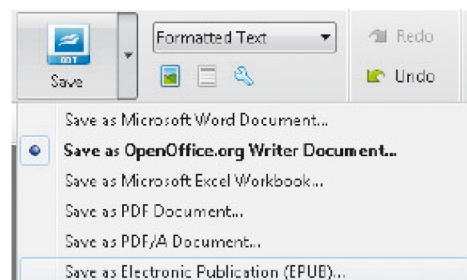

- Overall technology tuning delivers increased processing speed over the previous version
- **Black and White** mode boosts conversion speed up to 45% over the previous version*
 - Convert documents with simple layouts where colour retention is not needed (e.g. contracts, books and letters) at faster speeds.

- **Fast reading mode** processes up to 70% faster than in default **Thorough** reading mode. **IMPROVED**

Greater flexibility and functionality when saving converted files

- **Native support for OpenOffice.org™ Writer**
 - Export to ODT format (.ODT) for working in open source compatible editors.
 - Send directly to OpenOffice.org™ Writer or other ODT editors.
 - ABBYY ADRT re-creates headers, footers, page numbering and table of contents across pages in resulting ODT (Open Document Text) files.

- **PDF file output with bookmark support**
 - Save converted documents to PDF with intelligent "content outline" formatting. Outlines with live links make it easier to navigate PDFs.
- **Export to multiple formats for e-book readers**
 - Save documents to formats for reading on e-book reading devices or iPad®.
 - Save to EPUB and FictionBook (FB2) formats or to send to an Amazon Kindle™ Account for reading on e-book devices.

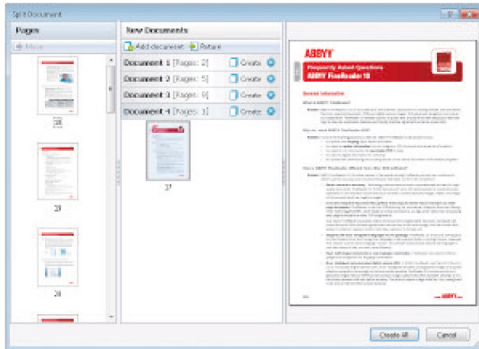

Top new features

More languages for global communication

- New recognition languages: Arabic, Vietnamese, and Turkmen (Latin)

Enhanced productivity with improved tools and navigation

- Check and edit documents with the enhanced Verification tool and Style Editor
- Easily separate multiple files with a **NEW Split Documents** option

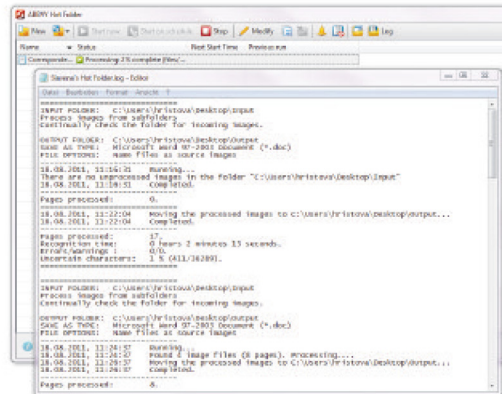

- Effortlessly change page numbering

Improved efficiency when working with digital camera and other images**

- Adjust brightness/contrast or levels (tonal values) on images for more accurate results
- Easily apply changes to individual document pages with the Image Editor dialogue

More efficiency when working across a network (FineReader 11 Corporate Edition only)

- More control over “watched” folders
 - Schedule processing with increased flexibility (every minute/day/week/month).

- View extended logs with full descriptions for better monitoring of processed files.
- View pop-up notifications on processing status.

Redact sensitive information in documents

- Remove sentences or words from converted documents and replace the information with a blackout background with “dots” above it.

Quickly convert paper business cards into electronically accessible contact information

- Convert business cards into Microsoft® Outlook® compatible vCard (.vcf) format with the **NEW Business Card Reader** application for Windows.

Easier access to custom scenarios and automated processing

- Effortlessly navigate to, and work with custom **Tasks**. The Task Manager makes it easy to create and share automated scenarios with other users in a workgroup by importing and exporting tasks.

* Based on internal testing. Results may vary based on scanning settings and other factors. Processing speed numbers based on comparisons with previous versions or between FineReader processing modes.

** See digital camera requirements.
